Hoist and transformer configurations – The environmentally friendly solution

The 1st of February, 2024 we make changes to the way our GH3-hoists are ordered: by separating the hoist and transformer.

This new way of ordering makes it possible to order just-in-time shipments containing only the products needed at any given moment in the installation process. Up until now – as hoist and transformer were bulked – multi-stage installation procedures could result in a surplus – and potential scrapping – of parts. This problem is solved with the new way of ordering and thus the solution contributes to Guldmann's endeavor to reduce carbon footprint and offer still more environmentally friendly solutions. Another reason is to make customization easier, as we soon will release a new transformer variant which is Class II and with plug to mains.

Orders made from 1st of February, 2024 for GH3/GH3+ hoist will not automatically include transformer, wire, or connector in the order.

If you want to order a complete GH3/GH3+ hoist ready for installation, then you must separately order the items of each column (See picture below).

Hoist	Transformer	Wire	Connector
GH3/GH3+	Item no.: 551468	Item no.: 550514	Item no.: 550401
